WELL SECURE OIL TOOLS PVT. LTD.

Guide Shoe

A guide shoe is installed on the bottom joint of casing and is usually combined with a float collar in the casing string for conventional cementing operations. The guide shoe thru-bore allows conversion balls, tubes and debris to exit the casing without obstruction.

Features

 Rounded cement bull nose allows for smooth running and provides the ability to guide past ledges

Composite eccentric nose available

- Load bearing capability for setting on bottom
- Guide Shoe is PDC drillable
- Side ports
- Down-jets

Available sizes 4 ½" to 20" and any special sizes can be custom made as required.
