

Thermoplastic/Polymer Centralizer

Polymer centralizers are specially designed to provide proper centralization which is necessary to obtain good primary cementing job. In continuation of this, our Polymer centralizer is based on latest Composite & Polymer Technology that provides high performance in low cost as compare to other metal centralizers.

Features

- Low & ultra-low friction factors
- Light weight – 5 to 8 times lighter than metal centralizers
- Minimizes drag & reduces torque
- High strength & impact resistance
- High abrasion wear resistance
- Low friction, optimal standoff
- Reduced transport costs
- Chemically stable versus most acids and bases

Option

- Right, Left and Straight Vanes are Available or Customised as per request.

Available size is 4-1/2" to 13-5/8". Any special configuration can be supplied on customer's demand.
